If your goal is simply to move an object from one location to another, to create fades, or to transform size and rotation, it makes sense to use motion tweens and let Flash do the thinking for you. If you're trying to create highly complex animations that tweens can't handle (for example, a person running), you may want to try the more traditional frame-by-frame approach.

### **Create a Motion tween animation in Adobe Animate**

You can use the Free Transform tool to make it smaller, larger, or drag it to a different place on the stage. Now, if you look at the timeline, a blue arrow should be in the empty frames between Frame 1 and 10. This means that a "Motion Tween" has been created and it will animate your symbol from the position in Frame 1 to the position in Frame 2.

### **How to Create a Motion Tween in Adobe Flash CS6 - dummies**

The number of samples it takes to make a convincing motion blur is entirely relative to the content. Something small with sharp edges that's moving super fast will need a lot of subframes; but something blurry moving slowly might need only a few. In general, using more will create a more convincing effect. Doing this in CSS
