A cladogram (from Greek clados  
"branch" and gramma "character")  
is a diagram used in cladistics to  
show relations among organisms. A  
cladogram is not, however, an  
evolutionary tree because it does  
not show how ancestors are related  
to descendants, nor does it show  
how much they have changed;  
nevertheless, many evolutionary  
trees can be inferred from a single  
cladogram.**

**A cladogram is a diagram that represents a hypothetical relationship between groups of organisms, including their common ancestors. The term "cladogram" comes from the Greek words *clados*, which means "branch," and *gramma*, which means "character." The diagram resembles the branches of a tree that extend outward from a trunk. However, the shape of the cladogram isn't necessarily vertical.**
