KEY WORDS The smallest structure visible with the human eye is about 50-100 μm in diameter (roughly the diameter of the sharp end of a pin). The cells in your body vary in size from about 5 μm to 40 μm . It is difficult to imagine how small these cells are, especially when they are clearly visible using a microscope.

The team will then perform genome-wide association and predicted gene-expression studies for the phenotypes developed. The results will help explain why some patients experience iAKI while others do not, provide some insight into the potential ways that iAKI develops, and generate new hypotheses about how iAKI may be treated and prevented.
