# Download Ebook Human Hormones Worksheet Answers

The way the endocrine system works is by releasing chemical messengers called hormones into the blood stream which are then transported throughout the body. Hormones act on specific target cells that have receptors for the specific signal molecule. As such, a hormone can only affect a tissue that has receptors for it.

THE HUMAN ENDOCRINE SYSTEM - Biology Is Fun

The anterior lobe secretes at least seven hormones.

One hormone, the human growth hormone (HGH), promotes body growth by accelerating protein synthesis.

This hormone is also known as

somatotropin. A deficiency of the hormone results in

dwarfism; an oversecretion results in gigantism.
