Human Thermal Environments | The Effects of Hot, Moderate ...

Ken Parsons states that "Air temperature, radiant temperature, humidity and air movement are the four basic environmental variables that affect human response to thermal environments." As an example, our productivity and health are tied together. When buildings are designed, careful attention is paid to the heating and AC systems in the design.

Thermal imaging is simply the process of converting infrared radiation into visible images that depict the spatial distribution of temperature differences in a scene viewed by a thermal camera. This will help us understand the distribution of heat in the lab. From the thermal imaging photos, we can see the difference in temperature in the Lab.

Thermal comfort is the condition of mind that expresses satisfaction with the thermal environment and is assessed by subjective evaluation (ANSI/ASHRAE Standard 55). The human body can be viewed as a heat engine where food is the input energy. The human body will release excess heat into the environment, so the body can continue to operate.
