Instead of flooding the body with antibiotics, what if we could program cells to fight off pathogens more effectively? This is the rationale for a new therapy for bacterial pneumonia developed by researchers at the National Institutes of Health. The approach leverages macrophages, specialized immune cells that 'eat' and destroy foreign bodies, as well as a naturally-produced molecule called ...

Therapies that target the programmed death-1 (PD-1) receptor have shown unprecedented rates of durable clinical responses in patients with various cancer types. One mechanism by which cancer tissues limit the host immune response is via upregulation of PD-1 ligand (PD-L1) and its ligation to PD-1 on ...
