In this section we will look at another method for solving systems. We will introduce the concept of an augmented matrix. This will allow us to use the method of Gauss-Jordan elimination to solve systems of equations. We will use the method with systems of two equations and systems of three equations.

In mathematics, division by zero is division where the divisor (denominator) is zero.Such a division can be formally expressed as , where a is the dividend (numerator). In ordinary arithmetic, the expression has no meaning, as there is no number that, when multiplied by 0, gives a (assuming); thus, division by zero is undefined.Since any number multiplied by zero is zero, the expression is ...

Example: Is A a subset of B, where A = {1, 3, 4} and B = {1, 4, 3, 2}? 1 is in A, and 1 is in B as well. So far so good. 3 is in A and 3 is also in B. 4 is in A, and 4 is in B. That's all the elements of A, and every single one is in B, so we're done. Yes, A is a subset of B. Note that 2 is in B, but 2 is not in A.

Elementary algebra encompasses some of the basic concepts of algebra, one of the main branches of mathematics.It is typically taught to secondary school students and builds on their understanding of arithmetic.Whereas arithmetic deals with specified numbers, algebra introduces quantities without fixed values, known as variables. This use of variables entails use of algebraic notation and an ...
