Phase 4: Intermediate Code Generation. Once the semantic analysis phase is over the compiler, generates intermediate code for the target machine. It represents a program for some abstract machine. Intermediate code is between the high-level and machine level language.

Larry Wall - Wikipedia
If recursive is set to false (default), Unit chooses the rightmost address of the last header field as the originating IP. In the example, it is set to 198.51.100.178 for requests from 192.0.2.0/24 or 198.51.100.0/24. If recursive is set to true, Unit inspects all header fields in reverse order. Each is traversed from right to left until the first non-trusted address; if found, it ' s chosen ...
