Solution (a) For a reversible, adiabatic transformation of an ideal gas $pV^\gamma = \text{constant}$ where, $\gamma = c_p/c_v$. For a unit mass of a gas, $V=1/\rho$, where ρ is the density of the gas. Therefore, $p \rho^{-\gamma} = \text{constant}$. Hence, if the initial pressure and density of a gas are p_1 and ρ_1 and the final pressure and density are p_2 and ρ_2 , and the gas undergoes
