The present book builds upon an earlier work of J. Hale, "Theory of Functional Differential Equations" published in 1977. We have tried to maintain the spirit of that book and have retained approximately one-third of the material intact. One major change was a complete new presentation of linear systems (Chapters 6~9) for retarded and neutral functional differential equations. The theory of ...

Introduction to Functional Equations: Theory and Problem ...

Functional differential equations of neutral type, or neutral differential equations occur when $\max\{n_1, n_2, \dots, n_k\} = n$. $\{\displaystyle \max\{n_1, n_2, \dots, n_k\} = n.\}$ Neutral differential equations depend on past and present values of the function, similarly to retarded differential equations, except it also depends on derivatives with delays.

Chapter 13 gives an introduction to the global and generic theory. There is also an appendix on the location of the zeros of characteristic polynomials. The remainder of the material has been completely revised and updated with the most significant changes occurring in Chapter 3 on the properties of solutions, Chapter 5 on stability, and Chapter 10 on behavior near a periodic orbit.
