3.1 Introduction to Logistic Regression We start by introducing an example that will be used to illustrate the analysis of binary data. We then discuss the stochastic structure of the data in terms of the Bernoulli and binomial distributions, and the systematic structure in terms of the logit transformation. The result is a generalized linear

? by J' ? (T) and equating $J' = J'[T]$, we can check that the solution T of the thermistor problem is a temperature solution of (2.1). The unique existence of classical solutions of the thermistor problem has been proved by Cimatti [6] by transforming the charge conservation equation into the Laplace equation.

(2) Mathematical Theory: It will be wrong if we say that the decision-making techniques owe too much to the mathematical theory of taking decisions. Venture analysis, game theory, probability theory, waiting theory are a few of the theories on the basis of which a manager analyses a given fact and takes decision accordingly.
