AN INTRODUCTION TO SET THEORY

Set theory begins with a fundamental binary relation between an object o and a set A . If o is a member (or element) of A , the notation $o \in A$ is used. A set is described by listing elements separated by commas, or by a characterizing property of its elements, within braces $\{ \}$. Since sets are objects, the membership relation can relate sets as well.

Set theory - Wikipedia

Introduction to naive set theory Fundamental set concepts. In naive set theory, a set is a collection of objects (called members or elements) that is regarded as being a single object. To indicate that an object x is a member of a set A one writes $x \in A$, while $x \notin A$ indicates that x is not a member of A .

Set builder form In Set-builder set is described by a property that member must satisfy. 1. $\{x : x \text{ is even number divisible by } 6 \text{ and } x < 100\}$. 2. $\{x : x \text{ is natural number less than } 10\}$. Equal sets Two sets are said to be equal if both have same elements. For example, $A = \{1, 3, 9, 7\}$ and $B = \{3, 1, 7, 9\}$ are equal sets.
