Pchem solutions manual's nice for figuring out how to work those problems you get stuck on. If your at the point of using this book you probably don't care what I have to say about it.

There's a few errors in the book but that has nothing to do with the seller. Have a fun semester or two for that matter.

system is a region of space or open system in that mass such as air and food can cross its control boundary. The system can also interact with the surroundings by exchanging heat and work across its control boundary. By tracking these interactions, we can determine the energy conversion characteristics of this system.

Thermodynamics and Heat Transfer 1-1C Thermodynamics deals with the amount of heat transfer as a system undergoes a process from one equilibrium state to another. Heat transfer, on the other hand, deals with the rate of heat transfer as well as the temperature distribution within the system at a specified time.
