Intuitive Probability and Random Processes using MATLAB® is an introduction to probability and random processes that merges theory with practice. Based on the author's belief that only "hands-on" experience with the material can promote intuitive understanding, the approach is to motivate the need for theory using MATLAB examples, followed by theory and analysis, and finally descriptions of "real-world" examples to acquaint the reader with a wide variety of applications.

The theory of probability supplies a good deal of counterintuitive results. (See, for example, Bear cubs problem, Birthday Coincidence, Lewis Carroll's pillow problem, Monty Hall Dilemma, but there are more.)However, the theory of probability arose from practical applications and is, in essence, a formal encapsulation of the intuitive view on chance.
