GSM - Wikipedia

A table of GSM power levels is defined, and the base station controls the power of the mobile by sending a GSM "power level" number. The mobile then adjusts its power accordingly. In virtually all cases the increment between the different power level numbers is 2dB. The accuracies required for GSM power control are relatively stringent.

SMS (short message service) is a text messaging service component of most telephone, Internet, and mobile device systems. It uses standardized communication protocols to enable mobile devices to exchange short text messages. An intermediary service can facilitate a text-to-voice conversion to be sent to landlines. SMS, as used on modern devices, originated from radio

### VSWR - Antenna Theory

At a cell site, the total radio frequency (RF) power that can be transmitted from each transmitting antenna depends on the number of radio channels (transmitters) that have been authorized by the Federal Communications Commission (FCC) and the power of each transmitter. Although the FCC permits an effective radiated power (ERP) of up to 500 watts per channel (depending on the tower height ...

Background The use of mobile broadband technologies UMTS/HSPA and LTE in the 800 and 900 MHz band will cause interference to the GSM-R system which operates in a band adjacent to the public 900 MHz band. In order to avoid the potential detrimental effects of this 900 MHz interference to the GSM-R system, Omnitele has ...

An SMS can contain up to 140 bytes. The GSM character set is encoded using 7-bits, rather than the usual 8-bits that make a byte. This means there can be 160 characters in an SMS. This 7-bit limitation means only 128 standard characters can be encoded. The GSM standard gets round this by also having the Extended GSM character

The voltage standing wave ratio (VSWR) is defined. VSWR is a measure of the reflected power on a transmission line. VSWR is a function of the characteristic impedance of the transmission line and the impedance of the antenna. VSWR specs (specifications) are introduced, along with formulas for mismatch loss and return loss in relationship to VSWR.

Is GSM-R the limiting factor for the ERTMS system capacity?

NO, considering the actions taken and the sometimes unconventional solutions used based on engineering expertise and creativity, GSM-R is not the limiting factor in ERTMS right now. YES, in the long run and with

High-Speed Railway Communications: From GSM-R to LTE-R

The Global System for Mobile Communications (GSM) is a standard developed by the European Telecommunications Standards Institute (ETSI) to describe the protocols for second-generation digital cellular networks used by mobile devices such as mobile phones and tablets. It was first deployed in Finland in December 1991. By the mid-2010s, it became a global standard for mobile communications ...
