$$1 = \sin^2 x + \cos^2 x$$

$$1 + \cos^2 x = \sin^2 x + \cos^2 x + \cos^2 x$$

$1 + \cos^2 x = \sin^2 x + 2\cos^2 x$ idk if the
answer can go further than this.

Approach: To directly count the subarrays with exactly K different integers is hard but to find the count of subarrays with at most K different integers is easy. So the idea is to find the count of subarrays with at most K different integers, let it be $C(K)$, and

Get Free Ishan Solution Of Engineering Mathematics 2

the count of subarrays with at most $(K - 1)$ different integers, let it be $C(K - 1)$ and finally take their difference, $C(K) - C \dots$

Count of subarrays having exactly K distinct elements ...

We know, $[math]a^2 + 2ab + b^2 = (a$
