Dynamic Balancing International Balancing Standards Industrial ISO 1940-1:2003 is also intended to facilitate the relationship between the manufacturer and user of rotating machines, by stating acceptance criteria for the verification of residual unbalances. Detailed consideration of errors associated with balancing and verification of residual unbalance are given in ISO 1940-2.

ISO - ISO 21940-11:2016 - Mechanical vibration — Rotor ... International Standard ISO 1940/1 is a widely- accepted reference for selecting rigid rotor balance quality. This paper is presented as a tutorial and user's reference of the standard and its practical applications. A simplified method is shown for determining permissible residual unbalance for various rotor classifications.

NOTE 1 Typically, completely assembled rotors are classified here. Depending on the particular application, the next higher or lower grade may be used instead. For components, see Clause 9 of ISO 21940-11 . NOTE 2 All items are rotating if not otherwise mentioned (reciprocating) or self-evident (e.g. crankshaft drives).
