### Apache Kafka

Kafka was born near the Old Town Square in Prague, then part of the Austro-Hungarian Empire. His family were German-speaking middle-class Ashkenazi Jews. His father, Hermann Kafka (1854–1931), was the fourth child of Jakob Kafka, a shochet or ritual slaughterer in Osek, a Czech village with a large Jewish population located near Strakonice in southern Bohemia.

### Franz Kafka - Wikipedia

Kafka combines three key capabilities so you can implement your use cases for event streaming end-to-end with a single battle-tested solution: To publish (write) and subscribe to (read) streams of events, including continuous import/export of your data from other systems.

### Apache Kafka

Apache Kafka is a distributed data store optimized for ingesting and processing streaming data in real-time. Streaming data is data that is continuously generated by thousands of data sources, which typically send the data records in simultaneously. A streaming platform needs to handle this constant influx of data, and process the data sequentially and incrementally.

### What is Apache Kafka? | AWS

Apache Kafka is an open-source stream-processing software platform developed by the Apache Software Foundation, written in Scala and Java. The project aims to provide a unified, high-throughput, low-latency platform for handling real-time data feeds. Kafka can connect to external systems (for data import/export) via Kafka Connect and provides Kafka Streams, a Java stream processing library .
