ISTRUZIONI DI MONTAGGIO - Fastech-Racing

The Leopard (or Leopard 1) is a main battle tank designed and produced by Porsche in West Germany that first entered service in 1965. Developed in an era when HEAT warheads were thought to make conventional heavy armour of limited value, the Leopard focused on firepower in the form of the German-built version of the British L7 105-mm gun, and improved cross-country performance that was ...

Your Guide to Engine Features and Batteries on Catamarans

The engine is the MTU MB 873 diesel engine, providing 1,100kW (1,500shp), with a Renk HSWL 354 gear and break system. An enhanced version of the EuroPowerPack, with a 1,210kW (1,650shp) MTU MT883 engine, has been trialled on the Leopard 2.

125cc LEOPARD TaG engine - Melbourne Kart Centre

I watch kepted on these engines during the mid sixties on the Puma and Jaguar long range frigates. They were noisy, dirty, leaky and very high maintenance. Big advantage over steam though, you could go half way round the globe on one fill. Each engine had a fluid coupling connected to a monstrous hydraulic gearbox. Four to each shaft.

Leopard 2 maintenance hall; Leopard 2 1/35 scale drawings; Here is the introduction that Tankograd released about this book on their website: Introduced in the middle of the Cold War, the Leopard 2 main battle tank became the successor of the Leopard 1 MBT in 1979. From the day of its introduction, the Leopard 2's design turned out to be the ...

Leopard — Italian Motors USA LLC

Horsepower is a function of torque and engine rpm; if you have more rpm, you need less torque, and vice versa. So, the simplest way to increase horsepower is to run the engine at higher rpm. In the karting world, Yamaha KT100S models typically rev to about 16,000 rpm and Leopard engines to about 17,000 rpm.
