Control of Linear Parameter Varying Systems with Applications

In addition, the model is well suited for well-known and standard controller synthesis procedures. The outcome is an average linear parameter-varying (LPV) model that captures the dynamics from the insulin delivery input to the glucose concentration output constructed based on the UVA/Padova metabolic simulator.

LINEAR, PARAMETER-VARYING CONTROL AND ITS APPLICATION TO ...

Linear parameter varying (LPV) systems are described by linear differential equations whose describing data depend—possibly in a nonlinear fashion—on time-varying parameters. The goal of the LPV synthesis problem is to design a controller of the very same structure such that the overall controlled system satisfies certain

Linear Parameter-Varying Control for Engineering ...

control of linear, parameter varying (LPV) systems [4, 5, 6, 14, 15, 20, 21]. Parameter-dependent systems are linear systems, whose state-space descriptions are known functions of time-varying parameters. The time variation of each of the parameters is not known in advance, but is assumed to be measurable in real-time.

Linear parameter-varying (LPV) control (Mohammadpour and Scherer, 2012) is a promising candidate for control design that can be classified as an adaptive control technique based on the extension of powerful linear time-invariant (LTI) approaches such as H_2/H_∞ optimal control, see e.g., (Mohammadpour and Scherer, 2012), to address the control design problem for NL and TV systems.

Linear Parameter Varying Control Research Papers ...

The focus of this dissertation is to design a controller for linear parameter varying (LPV) systems, apply it specifically to air-breathing hypersonic vehicles, and examine the interplay between control performance and the structural dynamics design.

Linear parameter-varying control - Wikipedia

Linear Parameter-Varying Models What are Linear Parameter-Varying Models? A linear parameter-varying (LPV) system is a linear state-space model whose dynamics vary as a function of certain time-varying parameters called scheduling parameters. In MATLAB®, an LPV model is represented in a state-space form using coefficients that are parameter dependent.
