## **Linear system - Wikipedia**

A system of linear equations consists of two or more equations made up of two or more variables such that all equations in the system are considered simultaneously. The solution to a system of linear equations in two variables is any ordered pair that satisfies each equation independently.

## **Linear System Solutions**

A System of Linear Equations is when we have two or more linear equations working together.

## **Systems of Linear Equations**

A solution of a linear system is an assignment of values to the variables  $x_1, x_2, \dots, x_n$  such that each of the equations is satisfied. The set of all possible solutions is called the solution set. A linear system may behave in any one of three possible ways: The system has infinitely many solutions. The system has a single unique solution.

## **Study Guide: Systems of Linear Equations**

A linear system of equations is a set of linear equations in variables (sometimes called " unknowns "). Linear systems can be represented in matrix form as the matrix equation (1) where  $A$  is the matrix of coefficients,  $x$  is the column vector of variables, and  $b$  is the column vector of solutions.
