ITP Industrial Distributed Energy: A Guide to Developing ...

A simple absorption refrigeration system common in large commercial plants uses a solution of lithium bromide or lithium chloride salt and water. Water under low pressure is evaporated from the coils that are to be chilled. The water is absorbed by a lithium bromide/water solution. The system drives the water off the lithium bromide solution ...

Absorption chillers use a binary .solution of a refrigerant and an absorbent, and different solutions allow absorption chillers to meet a range of site cooling needs. For space conditioning and other requirements that require chilling fluid temperatures of 40 ° F or higher, water /lithium bromide (refrigerant/ absorbent) is the most common solu ...

Lithium Bromide Refrigeration System

chiller could result in crystallization of the lithium bromide solution inside the machine, rendering it temporarily inoperative. A potentially lengthy decrystallization process might be required to return the chiller to normal operation depending on the severity of the crystalli-zation and/or the length of time the machine was without power.

Combined Heat and Power Technology Fact Sheet Series

I would remove all of the bromide and refrigerant water, then do a lithium hydroxide wash. Refer to service manual or call the manufacturer on how to perform this. If you have enough open top barrels to put the bromide in, oil should go to the top pretty good since the bromide is a lot heavier. Then skim it off of the top.

Lithium Bromide Absorption Refrigeration & Air ...

An interesting point to note about absorption chillers is that they don ' t use conventional refrigerants. Instead they use water as the refrigerant, and this is mixed with either ammonia or Lithium Bromide. Lithium Bromide is more common because it is safer and non toxic, so we ' ll look at how the water Lithium Bromide type chillers work.
