As base engine for the Mustang (the last vehicle to host this engine) the slightly quakey V6 produced acceptable torque, but didn't rev with any enthusiasm, and drank more gas than an engine its size should have. In its last year, it was good for an EPA-reported 16-mpg-city and 24-mpg-highway rating when coupled to an automatic transmission.

The composite upper intake manifold and cast aluminum lower intake from the L35 engine is also used on the LU3. The LG3 uses a cast aluminum upper intake and a cast iron lower intake. The lower intake eliminated the EGR valve. The LU3 also received a quiet cam to help reduce vibration at both idle and high engine speeds. This camshaft used the same lift and duration as the older design, but the cam was reprofiled to keep the valve lifters in full contact with the cam lobes as the cam ramps down.

The Chevrolet V6 has become a very important Jeep conversions engine, and is swapped into many Jeeps with great frequency now. By 1978, Chevrolet had 23 years of building its famous Small Block V8 under its belt. The energy and fuel crunch of the era dictated a lighter, leaner motor than the V8 and GM took on the engineering and production of an important new engine.
