lens. He'd grown up with Auto focus on every camera he'd ever owned and hadn't thought this his camera might have manual focus. So when is Manual Focus Better than Auto Focus?

5 Scenarios when it's OK to use Autofocus ... - Videomaker.com

Autofocus is just another tool at your disposal. Any time you want control or consistency, there's a good chance it will do more harm than good. You probably should use manual focus when you're doing anything like HDR images, macro images, panoramas, or anything else where you're combining more than one image.

How to use manual focus on your dSLR lens - CNET

Manual focus is for taking over when your camera's autofocus can't do a good enough job. For example, with Milky Way photography, almost no cameras can autofocus on the stars successfully, and manual focus is a must. The same goes in low-contrast environments like a thick fog. Most of the time, though, autofocus is more than good enough.

4. Autofocus vs. Manual Focus | Top Eight Considerations ...

If you're shooting a selfie or a vlog where both you and the camera are stationary, manual focus is probably a better option, as autofocus can sometimes focus on things it shouldn't or lose you as its target and start hunting. But if you or the camera is moving, autofocus is probably the better choice.

Manual Focus Vs Autofocus Dslr

Autofocus and manual focus do exactly the same thing: they adjust the focus of your camera's lens. But, with the former, the camera itself determines the sharpest focus using sensors devoted to measuring it. In autofocus mode, the photographer doesn't have to do anything. In manual mode, the photographer has to adjust the lens' focus by hand.
