How to Create a Dynamic Chart Range in Excel

To create a named range, we're going to use the name manager. However, it will be easier to enter the formula using the formula bar, so I'll start by entering the OFFSET function in K6, and then use that formula to create a named range in the next step. The OFFSET function takes 5 arguments: reference, rows, columns, height, and width.

Excel - Dynamic Name using OFFSET not working - Microsoft ...
Excel VBA Named Range. When we work with a large amount of data to avoid referring to a particular cell or cell ranges we usually create named ranges and it allows us to refer to the required cell range through the named range. In VBA to create name range we have Add Name Function. We can select a cell or range of cells and give a name to it.

How to use the offset method with named ranges

Where To Download Mastering Excel Named Ranges Offset And Dynamic Charts

Named ranges are preferable as their extent can be modified without going behind the scenes to manipulate the raw VBA code. They also do not need any special \$ handling to avoid a "shift" when generating the OFFSET functions and applying them to the cell ranges. Managing the named ranges can then be done by non-programmers after the sheet is

...

Dynamic Named Range in Excel - #1 Excel tutorial on the net

A named range, range name, or defined name all refer to the same object in Excel; it's a descriptive name — such as Jan_Sales or June_Precip — that is attached to a specific cell or range of cells in a worksheet or workbook. Named ranges make it easier to use and identify data when creating charts, and in formulas such as:
