## **Materials for Civil and Construction Engineers**

**Although not all civil and construction engineers need to be material specialists, a basic understanding of the material selection process, and the behavior of materials, is a fundamental requirement for all civil and construction engineers performing design, construction, and maintenance. Material requirements in civil engineering and construction facilities are different from material requirements in other engineering disciplines.**

Static Load Application: The static loads are sustained loads acting on the structure. They remain acting on the structure for a long period of time. They do not cause any vibration or shock on the structure. The examples of static load are load acting on a beam, the load acting on the ground due to a pier, the load acting on a column, etc.**
