Age word problem: Imran (video) | Khan Academy

Example #1. In this problem, we don't know Jack's or Diane's age. Since Jack's age is expressed in relation to Diane's age (in this problem, Jack is two years older than Diane), so then our variable will be based on Diane's age. In other words, let d = Diane's age. If Jack is two years older than Diane, then Jack's age must be: $d + 2$.

Age Word Problems (solutions, examples, videos)

This problem refers to Heather's age two years into the future and three years back in the past. Unlike most "age" word problems, this exercise is not comparing two different people's ages at the same point in time, but rather the same person's ages at different points in time.
