Mercury Marine
The trim sensor lets the engine know where the engine is located in the trim range. It does this by a pin that spins a knob on the sensor as the engine trims up. If this sensor fails and falsely tells the computer that the engine is trimmed all the way up, it will limit the RPM's of the engine, so it won't go over 4100 RPM's.

Mercury Verado Problems: What You Need To Know About Verados
What are some engines that can use tilt and trim? Some tilt and trim units are made for smaller engines, like those with 35 horsepower or less. Other units have been designed for more powerful, and therefore heavier, outboards with greater horsepower. Many Mercury boat outboards, like those listed below, can be fitted with trim and tilts.

wrd1972: yes, that's the trim sensor. I just installed a trim gauge on my Suntracker. I have a 2009 Mercury EFI 90hp 45. The stock sensor is analog, and the analog trim gauge will connect right up. Nice knowing where your motor is underway.

Mercury Engine TRIM Sender OEM Installation - Moderated ...
The warning horn is activated any time engine speed exceeds the maximum allowable RPM. The system will limit the engine speed to within the allowable range. Engine overspeed indicates a condition that should be corrected. Overspeed could be caused by incorrect propeller pitch, engine height, trim angle, etc. Sensor out of Range. Continuous

Mercury tilt and trim fix
Re: Troubleshooting trim sender/gauge? Your trim position sensor (if original) is a wire wound resistor and a wiper arm (rheostat) and the gauge is a voltmeter reading the voltage drop across the resistor. A "new style" one works the same way, except the resistor material is deposited on a plastic sheet, and the contact moves across that.

Mercury Engine Trim Sensor
Boat part number 1075722 is a new OEM trim sender assembly from Mercury Marine, part number 859187A1 . This port mount trim sender measures approximately 44 7/8" L overall, with (1) single pin terminal, and (2) single pin female terminals.
