3. Triton V10 Exhaust Manifold Failure. Exhaust manifolds bolt up to the engine cylinders and the exhaust system. They transfer used engine air to the exhaust system where it is then released into the atmosphere. On the Triton 6.8, the bolts or studs that connect the manifold to the engine block are prone to rusting and failing.

First, note the coolant level when the engine is cold. Take your time here – you want to drive the car for 30 mins. After driving the car, let it sit and idle for a while. The front radiator fans should come on and the engine should maintain a steady temp. If the engine continues to warm and will eventually overheat, walk away.

The A/C delivers cold air immediately when starting an engine cool enough to trigger the default cold start high engine idle, ~ 1500-1600 rpm. The A/C will not deliver cool air upon starting, if the engine has been recently driven (warm engine idle speed ~ 600-700 rpm), until the car has been driven a while.

Subaru Air Conditioning Explained - All Wheel Drive Auto

3 years ago A better way to get a nice time-format (1 year ago, 2 months until) without all the trailing months, days, hours, minutes, seconds in the result is by using the DateTime format and using the date_diff function as they both does most of the heavy lifting for you
