Problem 1: Father and Son's Ages.

Two times the father's age is eight more than six times the son's age.

Ten years ago, the sum of their ages was 36 years. The age of the son is: Solution. a.

Alligation or Mixture - Aptitude Questions and Answers

In algebra, mixture problems

File Type PDF Mixture Problems With Solution

always fall into 1 of 3 categories.
A) Mixing 2 solutions to make a third. Example: You need 20 liters of 80% antifreeze solution. You have solutions of 75% antifreeze and 95% antifreeze.

Solving Mixture Problems

Flashcards | Quizlet

We can let x = the number of liters of the 90% purity solution and y = the number of liters of the 97% purity solution. We need to determine the value of x . Since there are 21 liters of the solution:
 $x + y = 21$
 $y = 21 - x$
Since after mixing the two solutions the new mixture has 97% purity:
 $0.9x + 0.97y = 0.94(x + y)$
 $90x + 97y = 94x + 94y$
 $3y = 4x$
