Modeling Contact with Abaqus/Standard - 4RealSim

Abaqus is the leader in contact modeling, and as contact modeling has advanced in general, it has also advanced in Abaqus/Standard and Abaqus/Explicit. In Abaqus/Standard, the primary formulation is surface-to-surface contact. Supplementary formulations include edge-to-edge, edge-to-surface and vertex-to-surface.

Modeling Contact with Abaqus/Standard - VIAS

Models in which ABAQUS/Standard cannot calculate a reasonable because a node-based surface is used. If there are other contact pairs in the model with surfaces, ABAQUS/Standard uses the average dimension of all of the slave surface element faces.

Contact Robustness & Performance

Abaqus/CAE is capable of pre-processing, post-processing, and monitoring the processing stage of the solver; however, the first stage can also be done by other compatible CAD software, or even a text editor. Abaqus/Standard, Abaqus/Explicit or Abaqus/CFD are capable of accomplishing the processing stage.

29.2.11 Common difficulties associated with contact ...

To avoid such problems, you can specify a permissible interference value, v , for the contact pair that is larger than the overclosure for the contact pair. Abaqus/Standard will ramp v down to zero during the step. For details on specifying allowable interferences, see Modeling contact interference fits in Abaqus/Standard.

Modeling Porous Elastomers with Abaqus/Standard

Models in which ABAQUS/Standard cannot calculate a reasonable h_c because a node-based surface is used. If there are other contact pairs in the model with surfaces, ABAQUS/Standard uses the average dimension of all of the slave surface element faces.

Common difficulties associated with contact modeling in ...

During analysis, I get this warning: The general contact domain for modeling contact interactions in Abaqus/Standard has double-sided facets. Initial contact adjustments for resolving gaps and ...

Modeling Contact with Abaqus/Standard

If the penetration in the model is h , you may declare $v = h$ or request an automatic shrink fit. In either case Abaqus/Standard will consider the two bodies to be just in contact at the start of the simulation. As the allowable interference, v , is decreased during the step, Abaqus/Standard pushes the surfaces apart until there is no more allowable penetration.

Abaqus Leads the Way with Latest Advances in Contact Modeling

This document provides a summary of a remarkably simple and accurate constitutive model to describe the macroscopic elastic response of porous elastomers based on homogenization solutions. The model is very suitable for implementation in Abaqus using the UHYPER user subroutine. A schematic of a porous elastomer with spherical pores of ...
