You ' ll know for certain that you are dealing with a molecular compound if only nonmetals are present.; To name a covalent compound, you need the molecular formula, knowledge of the prefixes used for naming, and a way to look up the name of an element given its atomic symbol.

Eleventh grade Lesson Ionic vs. Molecular Compounds  
Since we use different methods in naming binary covalent (molecular) compounds and ionic compounds, the first step in naming or writing the formula of a compound is to determine which of the 2 compound classes it belongs. This can be done as follows: Binary covalent compounds will contain only two types of non-metal elements.

[-] anion. We use the Principle of Charge Neutrality, that is, for an ionic compound to be stable its chemical formula **MUST BE NEUTRAL**. So you do not need to state the number of cations and anions, you only need to state what they are (and what their charge is).

Since we use different methods in naming binary covalent ...  
Hardness. Ionic Compounds: Ionic compounds are very hard because of their closely-packed lattice structure and the ionic bonds between the charged ions. They are very brittle, and it is difficult to bend them. Molecular Compounds: The solid forms of molecular compounds are generally very soft and brittle. The covalent bonds in such compounds are flexible, and bend or break easily.
