The size (λ) of the quantum involved in an excitation is equal to product of the Planck's constant (h) and frequency (ν). Here, the value of λ is. Compute the frequency in Hz, as follows: Substitute and for λ in the equation (1). Thus, the size of the quanta involved in this excitation is.

Community Reviews. Molecular quantum mechanics is an excellent book and, despite the opinion in some circles, is well suited to the needs of a student taking courses in Atomic and/or Molecular physics. I especially liked the slow build-up - the first three chapters are devoted entirely to freshening up the knowledge one has learned
