Flow Networks - Georgia Tech - Computability, Complexity, Theory: Algorithms

In optimization theory, maximum flow problems involve finding a feasible flow through a flow network that is maximum.. The maximum flow problem can be seen as a special case of more complex network flow problems, such as the circulation problem.The maximum value of an s-t flow (i.e., flow from source s to sink t) is equal to the minimum capacity of an s-t cut (i.e., cut severing s from t) i
