### Flow Networks - Georgia Tech - Computability, Complexity, Theory: Algorithms

In optimization theory, maximum flow problems involve finding a feasible flow through a flow network that is maximum.. The maximum flow problem can be seen as a special case of more complex network flow problems, such as the circulation problem. The maximum value of an s-t flow (i.e., flow from source s to sink t) is equal to the minimum capacity of an s-t cut (i.e., cut severing s from t) in ...

Min-Cost Max-Flow A variant of the max-flow problem Each edge  $e$  has capacity  $c(e)$  and cost  $cost(e)$  You have to pay  $cost(e)$  amount of money per unit flow flowing through  $e$  Problem: Find the maximum flow that has the minimum total cost A lot harder than the regular max-flow – But there is an easy algorithm that works for small graphs Min-cost Max-flow Algorithm 24
