Ni 9217 Manuals

The NI 9217 is an RTD analog input module for NI CompactDAQ and CompactRIO systems. The NI 9217 features four channels and 24 bits of resolution for PT100 RTD measurements. The NI 9217, compatible with 3- and 4-wire RTD measurements, automatically detects the type of RTD (3- or 4-wire) connected to the channel and configures each channel for the

The National Instruments NI 9217 4-Channel 24-Bit C Series Module features four channels and 24 bits of resolution for 100 Ω RTD measurements. The NI 9217 can be configured for two different sampling rate modes. With the high-sampling-rate mode, the 9217 can sample at up to 400 S/s (100 S/s per channel).

NI 9217 Connection Guidelines • Make sure that devices you connect to the NI 9217 are compatible with the module specifications. • You must use 2-wire ferrules to create a secure connection when connecting more than one wire to a single terminal on the NI 9217 . Wiring for High-Vibration Applications

NI 9217 (FPGA Interface) - CompactRIO Reference and ...

The following setup and environmental conditions are required to ensure the NI 9217 meets published specifications. Keep connections to the device as short as possible. Long cables and wires act as antennas, picking up extra noise that can affect measurements. Use shielded copper wire for all cable connections to the device.

NATIONAL INSTRUMENTS NI 9217 OPERATING INSTRUCTIONS MANUAL ...

You can configure the NI 9217 for two sample rate modes: high sample rate or high resolution. The NI 9217 is compatible with 3-wire and 4-wire RTD measurements, and it automatically detects the type of RTD (3-wire or 4-wire) connected to the channel and configures each channel for the

appropriate mode.

1) If you have already a NI 9217 module, you can connect your PT100 temperature sensor directly without using a transmitter. That means: Remove the transmitter, simply connect red cable (1) to RTD+, white cable (2) to RTD- and the second white cable (3) to COM. Use the sample NI 9217 program provided in the samples folder of NI.

Hello. I am using a NI-9217 RTD module in a CDAQ-9178 chassis. What is the difference between High-Resolution and High-Speed on the NI-9217? In my setup, I am sampling all four channels and realize the specified 800ms total for all four channels in high-resolution mode and the 10mS when in high-speed. The acquired signal does have more noticeable noise in the high-speed mode.
