CHAPTER 8: NOISE AND NOISE REDUCTION TECHNIQUES
White noise is a common source of electronic noise in circuitry and is also called Johnson noise or thermal noise. It is caused by the collisions of the charge carriers in circuitry e.g. electrons, and the noise power is proportional to absolute temperature – hence the term thermal noise.

EMC Books - Henry Ott Consultants
Noise reduction is the process of removing noise from a signal. Noise reduction techniques exist for audio and images. Noise reduction algorithms tend to alter signals to a greater or lesser degree. All signal processing devices, both analog and digital, have traits that make them susceptible to noise.
