Navier–Stokes equations - Wikipedia

Depending on the solute and range of concentration, an aqueous electrolyte solution can have either a larger or smaller viscosity compared with pure water at the same temperature and pressure. For instance, a 20% saline ( sodium chloride ) solution has viscosity over 1.5 times that of pure water, whereas a 20% potassium iodide solution has viscosity about 0.91 times that of pure water.

Chapter 6 SOLUTION OF VISCOUS-FLOW PROBLEMS

This is a solution in a non-viscous gas (compressible fluid) whose density, velocities and pressure goes to zero far from the origin. (Note this is not a solution to the Clay Millennium problem because that refers to incompressible fluids where  $\rho$  is a constant, neither does it deal with the uniqueness of the Navier–Stokes equations with respect to any turbulence properties.)
