Fluid mechanics studies the systems with fluid such as liquid or gas under static and dynamics loads. Fluid mechanics is a branch of continuous mechanics, in which the kinematics and mechanical behavior of materials are modeled as a continuous mass rather than as discrete particles. The relation of fluid mechanics and continuous mechanics has been discussed by Bar-Meir (2008).

When run on a computer, the algorithm thus produces a numerical picture of the evolution of the system's state, as it is conceptualized in the model. This sequence of values for the model variables can be saved as a large collection of "data" and is often viewed on a computer screen using methods of visualization.
