At present, there are two approaches for numerical simulation of gas-particle two-phase flow: two-fluid model and particle-trajectory model . CJ Hwang and GC Chang [4] computed the gas-particle two-phase flow in a nozzle by using time-dependent explicit MacCormark scheme to solve the gas equations and tracking the particle trajectories with

The general pressure equation (GPE) is a new method proposed recently by Toutant (J. Comput. Phys., 374:822-842 (2018)) for incompressible flow simulation. It circumvents the Poisson equation for the pressure and performs better than the classical artificial compressibility method. Here it is generalized for two-phase incompressible viscous flows with variable density and viscosity. First, the ...
