After the analysis phase, the conceptual model is developed further into an object-oriented model using object-oriented design (OOD).

In OOD, the technology-independent concepts in the analysis model are mapped onto implementing classes, constraints are identified, and interfaces are designed, resulting in a model for the solution domain.

Introduction to OOAD Object oriented analysis and design is a software engineering approach which models the system as interacting objects. Each object represents a system entity which plays a vital role in building of that system. Object Oriented Analysis (OOA) focuses on analysis of functional requirements for the system. Object Oriented Design (OOD) takes analysis model as input and produces implementation specification.
