"On the Revolutions of the Heavenly Bodies" was dedicated to Pope Paul III, whom Copernicus asked to protect him from vilification. In the Dedication (excerpts which are included here), Copernicus explains his reason for delaying publication of his book.

On The Revolutions Of Heavenly
Following his observations of the heavenly bodies, Nicolaus Copernicus (1473-1543) abandoned the geocentric system for a heliocentric model, with the sun at the center. His remarkable work, On the Revolutions of Heavenly Spheres, stands as one of the greatest intellectual revolutions of all time, and profoundly influenced, among others, Galileo and Sir Isaac Newton.

On the Revolutions of the Celestial Spheres - World ...
Now it is from the earth that the revolution of the heavens is observed and it is produced for our eyes. Therefore if the earth undergoes no movement this movement must take place in everything outside of the earth, but in the opposite direction than if everything on the earth moved, and of this kind is the daily revolution.

Dedication of the Revolutions of the Heavenly Bodies to ...
publication of De revolutionibus orbium coelestium (On the Revolutions of the Heavenly Spheres) containing his mathematical proofs did not occur until 1543, after a supporter named Rheticus had impatiently taken it upon himself to publish a brief description of the Copernican system (Narratio prima) in 1541.

On the Revolutions of Heavenly Spheres by Nicolaus Copernicus
Unit 3: Revolutions of the Heavenly Orbs During the the second century A.D. the Alexandrine astronomer Claudius Ptolemais elaborated a system of the heavens that adequately described all of the observed motions of the Sun, Moon, stars, and planets. The Earth sat unmoving at the center of an unchanging universe while the "heavens wheeled above".
