From the solution to this example we can now see why the constant of integration is so important in this process. Without it, in this case, we would get a single, constant solution,  $\sqrt{v(t)=50}$ . With the constant of integration we get infinitely many solutions, one for each value of the constant.

The definition of a supersaturated solution is one which contains more dissolved solute than could ordinarily dissolve into the solvent. A minor disturbance of the solution or introduction of a "seed" or tiny crystal of solute will force crystallization of excess solute. One way to supersaturate a solution is by carefully cooling a saturated ...

The linear equations in one variable is an equation which is expressed in the form of  $ax+b = 0$ , where  $a$  and  $b$  are two integers, and  $x$  is a variable and has only one solution. For example,  $2x+3=8$  is a linear equation having a single variable in it. Therefore, this equation has only one solution.
