The GT was based on the Kadett chassis with the engine pushed rearward by about 14" for better weight distribution. Considering that the Opel CIH 1.9L is all cast iron and close to 400#, swapping something modern and aluminum will only lighten the front, so moving the engine forward to fit more easily shouldn't mess up the balance badly.

Even with the relocated engine and a modified valve cover, the air cleaner snorkel of the 1900 H engine would not clear the Opel GT's sloping hood, so a blister was added for clearance. The same issue also kept Opel from installing the hotter 1900 H engine from the Rekord Sprint, which made 106 PS (105 hp/78 kW) with two Weber carburetors ...

The goal of this project was to build an Opel GT with around 200 HP but still have a daily driver behaved car. Of course other goals included minimal costs and ease of the transplant. My dream began probably 10 - 12 years ago after deciding to build a convertible GT and transplanting a super engine into it.

The Opel Association of North America - Hemmings

OPEL GT VS. 240Z. The Opel GT returned for 1970 with a variety of minor refinements. The most notable was that factory air conditioning was now optional, reinforcing the perception that the GT was more of a stylish tourer than a sports car. The 1100SR engine remained nominally standard, but it was on its way out, having sold poorly even in Europe.

The GT's underpinnings came from the lowly Kadett, but the design was executed with finesse. The bodies were built by Brissonneau and Lotz in Paris. The GT was launched in 1968 with a 60-bhp 1100cc, OHV four-cylinder engine, and the 1897cc "high-cam" engine, which developed 90 bhp and gave quite a bit more performance.
