Summary:opm is an R package designed to analyse multidimensional OmniLog® phenotype microarray (PM) data. opm provides management, visualization and statistical analysis of PM data, including curve-parameter estimation and discretization, dedicated and customizable plots, metadata management, automated generation of textual and tabular reports, ...

R-Forge: opm and opmdata: R Development Page

The motivation for the here presented opm package originated from (i) the need to overcome the limited graphical and analysis functions of the proprietary OmniLog® PM software and (ii) the desirability of an analysis system for this kind of data in a free statistical software environment such as R (R Development Core Team2011).
