Orbital Mechanics for Engineering Students - 3rd Edition
Orbital Mechanics for Engineering Students. The text focuses primarily on orbital mechanics, but also includes material on rigid body dynamics, rocket vehicle dynamics, and attitude control. Control theory and spacecraft control systems are less thoroughly covered. The textbook includes exercises at the end of each chapter,...

Publisher Summary. A topocentric coordinate system is one that is centered at the observer's location on the surface of the earth. To determine an orbit requires specifying six independent quantities that can be the six classical orbital elements or the total of six components of the state vector.

Force, then, is related to the primitive concepts of mass, length and time by Newton's second law. The unit of force, appropriately, is the Newton, which is the force required to impart an acceleration of 1m/s^2 to a mass of 1kg . A mass of one kilogram therefore weighs 9.81 Newtons at the earth's surface.
