Boost it with that adjustment but it is best to reduce (notch) that low end a bit for cleaner and clearer audio. The second adjustment is the Bandwidth which is set in the traditional audio nomenclature of octaves. In the amateur radio field, we aren't dealing with music material but the adjustment affects voice the same way.

To boost WiFi signal, you need to purchase an antenna with more gain than your current one. The gain of an antenna system relative to an isotropic radiator at radio frequencies is expressed in dBi, or decibels relative to isotropic. Most home routers come with small antennas, whose gain tends to be between 4–5 dBi.
