Pooled Referrals - Implementation Guide for Specialists

Background: Improving health care will require more effective guideline implementation and redesign of delivery processes and systems. Patient referral for specialty care is a key component of health system function that needs to be improved. Low back pain care is a widely documented example of the need for improvement.

Referral Management | Improving Primary Care Team Guide

Finally, the referral system should be able to read information such as insurance plan, ICD-10, and lab results from the EMR, as well as receive and deliver files such as continuity of care documents (CCDs). Information such as a patient's insurance plan can be used by the referral management system to match specialist recommendations with the

Patient Referral System Implementation Guideline Home Amdd

The first step is to develop or select a system for communicating important referral information consistently and efficiently. The system can be low-tech or high-tech—what matters most is that it meets the needs of both parties. Helpful approaches include using standardized forms, a shared electronic health record, or e-referral software.
