rectangular tank as most often built. Most concrete tanks are built with monolithic wall-to-wall and wall-to-footing joints. Assuming monolithic construction, the angle between the tangents to the original surfaces of a wall-to-wall or wall-to-floor joint remain fixed, but the joint is free to rotate.

We will refer to the PCA Rectangular Concrete Tanks design manual as PCA-R, and the circular tank design manual as PCA-C. An additional safety factor is used for the loads called the “Sanitation Coefficient”, we will denote it with SC for brevity. Note that this notation is not an industry standard. The purpose of the sanitation coefficient is to indirectly reduce the stress, and thus the strain, in the steel reinforcing. The result is lower strain in the concrete, and thus less cracking ...
