### **PERCENT ERROR WORKSHEET**

***The accepted value is the man's real height or the value he found after he carefully measured his height, or 5. So, percent error =  $1/5$ . Just convert  $1/5$  to a percent. We can do this multiplying both the numerator and the denominator by 20. We get  $(1 \times 20)/(5 \times 20) = 20/100 = 20\%$ .***

**The computation of percentage error involves the use of the absolute error, which is simply the difference between the observed and the true value. The absolute error is then divided by the true value, resulting in the relative error, which is multiplied by 100 to obtain the percentage error. Refer to the equations below for clarification. Absolute error =  $|V_{\text{true}} - V$**

### ***Percent Error Calculator***

***To find the percent of error, you find the difference between the predicted value or amount and the actual value (subtracting the absolute value of the numbers so that you do not get negatives). The numerator is this difference. Next you divide by the denominator which is the estimated or predicted amount. You will get a decimal outcome.***
